

Seminar: Export Control of Dual-Use Materials and Technologies in GUAM countries

Summary and Concluding Remarks

During this seminar, representatives from all the communities involved in this Target Initiative shared their opinions on the topics presented and had the opportunity of interact among each other.

This TI will Foster the interaction inside the communities and among them with different activities.

This TI have the following objectives:

- Development of a network of scientists: at national and regional level;
- Development of Master degree course on export control (with modular content that each of them could be studied individually with a credit system). Pilot case: Ukraine.
- Grant for a PhD student: to be done in Europe with the support of a local research group;
- Outreach to industry: mapping of the dual use industries and products and export control handbook

In order to implement this TI, the contents of the different objectives mentioned will be developed and send to the local authorities to have their feedback and opinion.

The success relies on working together.
